

Team R'ıyo

Six energies, one dataset.

We took our name from Manifest's "*Arıyo*" — six of us, each carrying a member's energy into the project.

Each of us is paired with one Manifest member whose vibe matches the role we played in this project. Click the names to visit our personal EMU430 pages.

Işıl Çakır

Hilal · the leader's poise

Project leadCoordination

Işıl held the project together — from initial dataset selection through final-page polish. If something needed deciding, Işıl decided it; if a deadline was approaching, Işıl was already three days ahead. Calm, systematic, and impossible to fluster.

Tuğçe Başaran

Lidya · the analyst's edge

Data wranglingEDA

Tuğçe lives in the data. She was the one who first noticed how skewed the company-tonnage distribution was, and pushed us toward the log-scale density plot you'll see in the Analysis page. Sharp, precise, and never satisfied with a chart that's only *almost* right.

Zeynep Kızıkan

Mina · the storyteller

NarrativeWriting

Zeynep turned numbers into a story. The narrative voice across these pages — and the framing of the 20,000-ton question as a real policy question rather than just a stat — comes from her. Warm, clear, and quietly persuasive.

Selin Atmaca

Sueda · the visual instinct

DesignVisualization

Selin is why the site looks like *this* and not like another stock template. The colour palette, the gradients, the cyan pop you keep noticing on hover — that's her hand. Strong taste, gentle delivery.

Tarık Buğra Birinci

Esin · the inspiration

EngineeringR / Quarto

Tarık is our engineer. The choropleth, the data-cleaning script, the R chunks that turn an unruly pivot table into a tidy data frame — all his terrain. Whatever the toolchain throws at us, he picks it up and makes it work.

Onur Can Gültekin

Zoktay · the closer

ModelingTax simulation

Onur owned the policy-simulation arc. The hypothetical 50/ton tax, the threshold sensitivity, the “what if we changed the rate” sanity checks — those came from him. Pragmatic, fast, and a little bit ruthless when an idea isn't worth keeping.
