

Team R'ıyo

Six energies, one dataset.

We took our name from Manifest's "*Arıyo*", six of us, each carrying a member's energy into the project.

Each of us is paired with one Manifest member whose vibe matches the role we played in this project.
Click the names to visit our personal EMU430 pages.

Işıl Çakır

Hilal · the leader's poise

Işıl contributed to the data cleaning and preprocessing phases of the project by studying the structure of the data, enhancing its consistency, and getting it ready for the analysis and visualization phases. Additionally, contributing to the development of the project website and the report.

Tuğçe Başaran

Lidya · the analyst's edge

Tuğçe is took part in the contributing to the data cleaning and preprocessing phases of the project. She helped for making sure that the final reliable dataset is ready to be used throughout the study. Additionally, participating in the collaborative development of the project website.

Zeynep Kızıkan

Mina · the storyteller

Zeynep helped with the visualization part of the project by creating and analyzing graphs and figures concerning the activities involved in handling hazardous materials. Provided contributions in translating data into graphical information which would be useful in the formation of the study's overall conclusions.

Selin Atmaca

Sueda · the visual instinct

Selin is in charge of the analysis of the dataset. She played a role in analyzing threshold-based situations and extracting information concerning material distribution and companies whose total cargo exceeded 20,000 tons. Additionally, she helped in preparing and organizing the project website.

Tarık Buğra Birinci

Esin · the inspiration

Tarık collaborated in visualizing the dataset of hazardous materials together in order to detect material concentrations and distributions via charts, heatmaps and histogram using the R program. Also working on the development of the project website.

Onur Can Gültekin

Zoktay · the closer

Onur helped analyze the data through evaluating material distribution, threshold-based analyses, and policy implications of the results. He contributed in making conclusions from the data and providing analytical evidence in support of the findings displayed in the project website. He also took part in the development of the project website.
